Experience

Feb 2021 – Present

Jr. Software Developer, *Hoolime*, Chandigarh, India.

- Built reusable react components, refactored old codebase and optimised individual components for performance
- Collaborated with team to create an API-service, for processing raw internal reports to more usable data using Python and Django, wrote custom logic for performing various actions on raw report data based on configurable JSON file
- Worked on their iOS app, fixed bugs, implemented new features, and improved UI + UX
- iOS App - Implemented Calendar using third-party library, used source code and modified it according to our needs, handled logic of showing correct events with live updates
- Fixed bugs and helped in maintenance of their web-based product, while actively reviewing peer's code and helping them out
- Collaborated with team to build a web-based Home Health Care app, for the management of user's family/relatives health related services
- Collaborated with team and built static website of Hoolime
- Implemented third-party libraries and service to their web-based Home Health Care product
